

This file summarizes the traffic volumes that the travel demand model estimates will use the existing bridges in 2031 under the No-Build condition and for each of the concepts for both AM and PM peak hours. The bar graphs illustrate how much traffic is estimated to use a new bridge and the corresponding reductions in traffic utilizing the existing bridge for each concept. An earlier version of this data was shown at the June open houses.

SALEM RIVER BRIDGE: AM EASTBOUND CROSSING VOLUMES

□ Center Street Bridge EB
■ New Bridge EB

SALEM RIVER BRIDGE: PM WESTBOUND CROSSING VOLUMES
